oxiti acniti

oxiti industrial oxygen concentrator

Oxiti industrial oxygen concentrator with high quality components from Japan and America, built in a rugged design aluminium casing. The concentrator uses pressure swing adsorption (PSA) technology and produces 8 liter per minute of oxygen. This unit gives peace of mind and many hours of stable oxygen production.

oxiti industrial oxygen concentrator

oxiti industrial oxygen concentrator

- ✓ 1, 5 and 8 LPM industrial oxygen concentrator
- ✓ High quality Japanese components and assembled in Japan
- ✓ Microprocessor controlled
- ✓ Low operating cost
- ✓ Transportable design
- ✓ Easy to install and maintain

technology

The Oxiti industrial oxygen concentrator uses pressure swing adsorption (PSA) technology. Air holds 3 major gasses, 21% oxygen, 78% nitrogen and 1% argon and an oxygen concentrator removes nitrogen from air.

Acniti uses a high-quality compressor in the oxygen concentrator, the compressor compresses over 100 liters of air per minute. The compressed air feeds into an air-dryer to remove all the moisture and other impurities. After the air-dryer, the air flows into one of the two oxygen sieves. In the sieve, nitrogen molecules stick to zeolite under pressure and oxygen passes through the sieve and flows to a small storage container. When the oxygen sieve saturates, and this happens in a matter of seconds, the solenoid valve system will switch to the second sieve to repeat the process. The first sieve then depressurizes, and the nitrogen purges out of the sieve and the oxygen concentrator. This process is constantly repeated.

quality components

The oxiti uses quality components from Japanese and American manufactures in a rugged aluminum casing. The quality components ensure a long life and easy maintenance with standard components. A lot of oxygen concentrators developed for the healthcare market are for home use and lack the strength, environmental design, and durability of the industrial oxygen concentrators. The industrial designed concentrators have larger and easy to wash and inlet filters. Another focus point is the air drying after the compressor. Water attracts easily to the zeolite. Once the water attaches to zeolite, the zeolite is no longer able to hold the nitrogen and the sieves need replacement.

The oxygen concentrator unit contains a pressure gauge which enables the user to check the pressure at the inlet of the nanobubble generator, the oxiti supplies a pressure of 70-100 kPa, when higher pressures are required, for dissolving larger quantities of gasses more efficiently please check the oxiti booster.
